## AIM & MODEL TYPE

Tips to develop a medium-scale empirical SFC model. A theory-constrained but data-driven method is used. Inspired by [Godley & Lavoie \(2006\)](#) and [Burgess et al. \(2016\)](#).

## EPISTEMOLOGICAL STATUS

The model is built upon [Eurostat](#) database & SNA. No dynamic optimisation / no representative agent.

Macro-accounting approach: evolution of BS and TFM entries under different scenarios.

## AIM & MODEL TYPE

Tips to develop a medium-scale empirical SFC model. A theory-constrained but data-driven method is used. Inspired by [Godley & Lavoie \(2006\)](#) and [Burgess et al. \(2016\)](#).

## EPISTEMOLOGICAL STATUS

The model is built upon [Eurostat](#) database & SNA. No dynamic optimisation / no representative agent.

Macro-accounting approach: evolution of BS and TFM entries under different scenarios.

## PROJECT

Data for [Italy](#) are used, but it can be replicated for other countries. Aim: create network of [interacting 'personal' SFC models](#) (using *R*).

## SECOND STEP: ‘WHO PAYS WHOM’

Address issues with Figure 1: a) Lines 6 to 9 do not sum up to zero; b) too many entries. Assume **firms produce it all!**

Entries (Italy, 2015)	Eurostat Code	Non-Financial Corporation	(capital)	Financial Corporations	Government	Households	Rest of World	Total economy (row total)
		\$11		\$12	\$13	\$14 \$15	\$2	\$1
Gross Output	P1	2095694		130440	306245	580440	0	3112819
Intermediate Consumption	P2	-1360170		-54429	-90092	-129658	0	-1634349
Taxes on Product	D21	0		0	189354	0	2251	191805
Subsidies on Products	D31	0		0	-24489	0	-167	-24636
Memo: GDP per sector		735524		76011	381038	450782	2084	1645440
Memo: total GDP		1645440						
GDP Redistribution		-909915	= -Σ	76011	381038	450782	2084	0
Consumption	P3	1312653		0	-311639	-1001014	0	0
Exports	P6	493934		0	0	0	-493934	0
Imports	P7	-446042		0	0	0	446042	0
Investment	P5 (G)	284895	-149558	-4429	-36959	-93949	0	0
Wages	D1	-411085		-32356	-161998	609723	-4284	0
Taxes on Production and Imports	D2	-26528		-5735	240236	-18620	-189354	0

Dividends	D42	-109941		-1633	4271	114625	-7322	0
Interests payments	D41	-5209		18574	-65237	30759	21113	0
Other property income	D4	-11995		-17221	3924	23481	1812	0
Taxes on Income and Wealth	D5	-27869		-8022	241582	-206485	-1206	0
Social Benefits (net of social contributions)	D6	1273		2461	-113732	112607	-2609	0
Other Current Transfers	D7	-5061		-1075	-6476	-6232	18844	0
Adjustments in Pension Funds	D8	-1272		-2461	0	3733	0	0
Capital Transfers	D9	18031		8294	-25421	2869	-3792	0
Acquisition less consumption of NPNFP	NP	-1535		-18	-420	789	1184	0
Tax - subsidies on product	-D21-D31	0		0	-164885	0	164885	0
Computed Net Lending Position		9123		34394	-44197	27017	-26336	0
Net Lending Position	B9	9123		34394	-44197	27017	-26336	0
Total by sector (column total)		0		0	0	0	0	0

Note: Italy, 2015, current prices, million euro.

### THIRD STEP: MERGING ENTRIES

Merge taxes, transfers and other 'secondary' entries to get the accounting structure of the model.

Entries (Italy, 2015)	Eurostat Code	Non-Financial Corporation	Financial Corporations	Government	Households	Rest of World	Total economy (row total)	
		\$11	(capital)	\$12	\$13	\$14 \$15	\$2	\$1
GDP Redistribution		-909915	= -1	76011	381038	450782	2084	0
Consumption	P3	1312653		0	-311639	-1001014	0	0
Exports	P6	493934		0	0	0	-493934	0
Imports	P7	-446042		0	0	0	446042	0
Investment	P5 (G)	264895	-149558	-4429	-36959	-93949	0	0
Wages	D1	-411085		-32356	-161998	609723	-4284	0
Total Taxes	D2-D5-D21	-54397		-11757	292484	-225105	-1206	0
Dividends	D42	-109941		-1633	4271	114625	-7322	0
Interests payments	D41	-5209		18574	-65237	30759	21113	0
Other property income	D4G	-11995		-17221	3924	23481	1812	0
Transfers (subsidies, benefits, etc.)	D3-D6-D7-D33	559		1380	-124220	110304	11967	0
(Change in) funds	D8-D9-NP	15224		5815	-25841	7411	-2608	0
Computed Net Lending Position		9123		34394	-44197	27017	-26336	0
Net Lending Position	B9	9123		34394	-44197	27017	-26336	0
Total by sector (row total)		0		0	0	0	0	0

Note: Italy, 2015, current prices, million euro.

## FOURTH STEP: THE BALANCE SHEET

Narrowed down creating 'other financial assets' composite entry (insurance tech. reserves, derivatives and other).

Entries (Italy, 2015)	Eurostat code	Non-Financial Corporations			Financial Corporations			Government			Households		
		Assets	Liabilities	Net	Assets	Liabilities	Net	Assets	Liabilities	Net	Assets	Liabilities	Net
Non-financial assets (dwellings)	NINHN	180,249.6	0.0	180,249.6	4,781.2	0.0	4,781.2	54,401.6	0.0	54,401.6	2,518,103.0	0.0	2,518,103.0
Currency and deposits	F2	308,930.0	32,763.0	276,167.0	326,009.0	2,027,611.0	-1,701,602.0	75,877.0	239,722.0	-163,845.0	1,273,045.0	0.0	1,273,045.0
Securities other than shares	F3	57,048.0	145,902.0	-88,854.0	1,675,684.0	504,827.0	1,134,857.0	27,908.0	2,097,250.0	-2,069,342.0	143,008.0	0.0	143,008.0
Loans	F4	18,947.0	1,067,001.0	-1,048,054.0	1,823,350.0	109,846.0	1,713,504.0	94,284.0	177,240.0	-82,956.0	13,707.0	691,961.0	-678,254.0
Shares and other equity	F5	525,651.0	1,666,671.0	-1,141,020.0	632,959.0	475,698.0	157,261.0	128,934.0	0.0	128,934.0	1,447,540.0	0.0	1,447,540.0
Other financial assets													
- Insurance technical reserves	F6	18,696.0	101,556.0	-84,660.0	6,358.0	758,730.0	-752,372.0	1,278.0	3,803.0	-2,525.0	862,636.0	0.0	862,636.0
- Derivatives and empt stock options	F7	15,425.0	14,307.0	1,118.0	125,954.0	138,737.0	-12,783.0	0.0	31,899.0	-31,899.0	738.0	68.0	670.0
- Other accounts receivable/payable	F8	147,171.0	91,326.0	55,845.0	26,448.0	5,664.0	20,784.0	115,005.0	74,245.0	40,760.0	13,266.0	93,518.0	-80,232.0
Net Worth	BF90			-1,849,208.4			564,430.2			-2,126,471.4			5,756,516.0

Note: Italy, 2015, current prices, million euro.

## EQUITY & SHARES

$$\frac{V_H}{E(NFW_H)} = \lambda_{1,0}^H + \lambda_{1,1}^H \cdot E(r_V) + \lambda_{1,2}^H \cdot \frac{E(YD_H)}{E(NFW_H)} + \lambda_{1,3}^H \cdot E(r_{BA})$$

where  $\lambda_{1,j}$  are empirically estimated. The same goes for  $D_H$  and  $B_H$ . Note:  $r_D = 0$ .

## OTHER FINANCIAL ASSETS

$$OFIN_H = \sigma_{OFIN}^H \cdot NW_H$$

When residual correction mechanism is used,  $OFIN_H$  is redefined as the residual share ( $\sigma_{OFIN}^H$ ) of net wealth.

Coherent with the hypothesis that  $x$ -type assets carry all the same average return rate.

## WHO PAYS WHOM

Seldom dividends received by  $i$  mirror its holdings. Two steps: *a*) total dividends received by  $i$  are **corrected** to fit empirical evidence ( $DIV_i = \epsilon_i \cdot DIV_{TOT} \cdot V_i / V_{TOT}$ , where  $\epsilon_i$  is the correction coefficient); *b*) each 'issuing' sector  $j$  **pays the same proportion** ( $\delta_j = DIV_j / DIV_{TOT}$ ) of total dividends to every other sector (so:  $DIV_{j,i} = \delta_j \cdot DIV_i$ ). The same goes for interest payments.

## FITTING PAST DATA AND FORECASTING

Residuals assumed to reduce steadily up until  $t_0$  and are unwound afterwards. For  $t \leq t_0$ , the estimate value of  $x$ , corrected to improve the fit, is:

$$x_t^* = e^{-\mu \cdot \frac{t}{t_0 - t}} \cdot (x_t^f - \bar{x}_t) + \bar{x}_t \quad (1)$$

where  $x_t^f$  is the forecast value of  $x$  at  $t$  and  $\bar{x}_t$  is the actual (average) value of  $x$ .

## FITTING PAST DATA AND FORECASTING (CONT'D)

## FITTING PAST DATA AND FORECASTING (CONT'D)

Possible capital gains/losses (revaluation effect) are assumed away on government bonds. As for other financial and real assets, the revaluation effect is automatically accounted for, as stocks at time  $t$  are defined as stocks at time  $t - 1$  *plus* changes in stocks' value from  $t - 1$  to  $t$ .

— Lags Only  
— Lags + Contemporaneous  
— Contemporaneous Only  
Dashed lines indicate the presence  
of lags/leads of length four or more.

Housing price index is a function of households' debt to income ratio ( $m_H = MORT_H/YD_H$ ):

$$p_H = h \cdot m_H \cdot \frac{E(YD_H)}{HOUSE_H}$$

where  $h$  = sensitivity of housing prices to household debt.  
Capital gains/losses on housing are:

$$CG_H = HOUSE_{H,-1} \cdot \frac{d(p_H)}{p_{H,-1}}$$

Housing investment can be now re-defined:

$$INV_H = \vartheta_0 + \vartheta_1 \cdot INV_{H,-1} + \vartheta_2 \cdot MORT_{H,-1} + \vartheta_3 \cdot p_{H,-1}$$
