TABLE 1: PHYSICAL MATRICES

(a) Physical flow matrix			(b) Physical stock-flow matrix			
	Material balance	Energy balance		Material reserves	Non-Renewable Energy reserves	Socio-economic stock
<b>Inputs</b>			<b>Initial stock</b>	$k_{m,-1}$	$k_{en,-1}$	$co2_{at,-1}$
Extracted matter	$+mat$		Resources converted into reserves	$+conv_m$	$+conv_e$	
Renewable energy		$+er$	Emissions			$+emis$
Non-renewable energy	$+cen$	$+en$	Production of material goods			$+y_{mat}$
Oxygen	$+O2$		Extraction/use of matter/energy	$-mat$	$-en$	
<b>Outputs</b>			Net transfer to oceans/biosphere			$+(\phi_{11} - 1) \cdot co2_{at,-1}$ $+ \phi_{21} \cdot co2_{at,-1}$
Industrial CO <sub>2</sub> emissions	$-emis$		Destruction of socio-economic stock			$-des$
Waste	$-wa$					
Dissipated energy		$-ed$				
Change in socio-economic stock	$-\Delta k_{se}$					
<b><math>\Sigma</math></b>	0	0	<b>Final stock</b>	$k_m$	$k_e$	$co2_{at}$

Note: matter is measured in Gt, while energy is measured in Ej. Hazardous waste not included. See Dafermos et al. (2017, 2018).

- Eco-SFC models usually focus on a single-area economy, but local impacts of climate change (and natural resources depletion) are likely to be **uneven across countries**

SFCMs vs  
DSGEMs

RECENT  
DEVELOPMENTS

AN Eco-2C-SFC  
PROTOTYPE

FINAL REMARKS

- We identified two types of *external* development and three types of *internal* development in SFC literature
- Successful cross-fertilisations include *AB-SFCMs* (microfoundations) and *IO-SFCMs* (mesofoundations)

FINAL REMARKS

- We identified two types of *external* development and three types of *internal* development in SFC literature
- Successful cross-fertilisations include *AB-SFCMs* (microfoundations) and *IO-SFCMs* (mesofoundations)
- Three main types of internal developments: *empirical*, *open-economy* and *ecological SFCMs*

FINAL REMARKS

- We identified two types of *external* development and three types of *internal* development in SFC literature
- Successful cross-fertilisations include *AB-SFCMs* (microfoundations) and *IO-SFCMs* (mesofoundations)
- Three main types of internal developments: *empirical*, *open-economy* and *ecological SFCMs*
- Possible *gap* in current literature: ecological models usually focus on single country or World economy

FINAL REMARKS

- We identified two types of *external* development and three types of *internal* development in SFC literature
- Successful cross-fertilisations include *AB-SFCMs* (microfoundations) and *IO-SFCMs* (mesofoundations)
- Three main types of internal developments: *empirical*, *open-economy* and *ecological SFCMs*
- Possible *gap* in current literature: ecological models usually focus on single country or World economy
- We presented an ecological 2-area SFC model prototype

FINAL REMARKS

- We identified two types of *external* development and three types of *internal* development in SFC literature
- Successful cross-fertilisations include *AB-SFCMs* (microfoundations) and *IO-SFCMs* (mesofoundations)
- Three main types of internal developments: *empirical*, *open-economy* and *ecological SFCMs*
- Possible *gap* in current literature: ecological models usually focus on single country or World economy
- We presented an ecological 2-area SFC model prototype
- An example: uneven technical progress, coupled with rising ecological consumption, can force high-carbon country governments to move further away from green technologies

FINAL REMARKS

- We identified two types of *external* development and three types of *internal* development in SFC literature
- Successful cross-fertilisations include *AB-SFCMs* (microfoundations) and *IO-SFCMs* (mesofoundations)
- Three main types of internal developments: *empirical*, *open-economy* and *ecological SFCMs*
- Possible *gap* in current literature: ecological models usually focus on single country or World economy
- We presented an ecological 2-area SFC model prototype
- An example: uneven technical progress, coupled with rising ecological consumption, can force high-carbon country governments to move further away from green technologies
- Overall, SFCMs are *effective tools* to analyse *complex* economic systems and their relationship with the ecosystem
